SUMMARY

Recent M.S. graduate in Supply Chain Analytics with experience in vendor sourcing, inventory support and project coordination. Applied Excel, Python, Power BI, and R to forecasting, inventory analysis, data visualization, and supply chain decision-making.

TECHNICAL SKILLS

Analytics: Excel, Power BI, Python, R	**Project Tools:** MS Project, ClickUp, Miro
Additional: SQL, GitHub, SAP, NetSuite	**Languages**: French (Native), English (Fluent)

EDUCATION

Master of Science, Supply Chain Analytics | CSUSM | *2026*
Associate of Arts, Business/Managerial Economics | West Valley College | *2024*
Bachelor of Science, Occupational Therapy | IFPVPS, France | *2020*

RELEVANT EXPERIENCE

Project Coordinator | Angel's Salumi & Truffles (Carlsbad, CA) | *Nov 2024 – Aug 2025*

- Supported the sourcing of 20 new vendors by gathering pricing, lead times, shelf life, and minimum order quantities for over 200 products to help purchasing decisions.
- Created vendor-specific purchasing spreadsheets to organize product information and provide a shared reference for purchasing, inventory, and accounting teams.
- Coordinated weekly project meetings with management, prepared agendas, tracked action items and deadlines, and followed up with the team to support project progress.
- Coordinated inventory organization and holiday order fulfillment, supporting operations during a period when orders tripled compared with the previous year.

SELECTED PROJECTS

Transportation Cost Analysis & Forecasting | *Python, Power BI*

- Analyzed 2022-2024 transportation data to evaluate shipping delays and trends by transportation modes, sites, and regions.
- Built Power BI dashboards and ETS forecasts to visualize trends and support transportation planning and decision making.

Supply Chain Decision Models | *Excel, ForecastX*

- Built Excel models for demand forecasting, inventory planning, and service-level decisions using Solver, Goal Seek, and quantitative methods.
- Compared forecasting methods using MAPE and evaluated inventory scenarios to support planning decisions.

Should-Cost Analysis | *Excel*

- Built a should-cost model for a Ti-6Al-4V aerospace bracket, using material, labor, manufacturing, and process cost drivers.
- Evaluated scenarios that lowered cost from $278.06 to $165.82 (40%), by improving buy-to-fly ratio from 10:1 to 1.8:1.
